SECTIONS

15 — Overview through End-to-End User Stories

1. Platform Overview

What is DentalOS AI — DentalOS AI is a dental practice operating system that combines a traditional practice-management UI (patients, appointments, clinical, claims, billing) with a simulated layer of autonomous “AI agents” that perform front-desk, clinical documentation, insurance, billing, and recall work. The demo is fully client-side: data lives in seeded JSON mock files and Zustand stores persisted to *localStorage*; AI responses (CEO Copilot, call transcripts, SOAP notes) are pre-scripted rather than generated by a live LLM.

Core vision — A single-pane-of-glass dental practice platform where an “AI Workforce” of 8 named agents handles repetitive operational work under human oversight, while a CEO Copilot gives practice owners conversational access to business insights, and a Workflow Engine lets staff automate event-driven processes without code.

Primary modules — Dashboard, Patients, Appointments, Clinical, Imaging, Insurance, Claims, Billing, Communications, AI Workforce, Workflows, Analytics, CEO Copilot, Integrations, Staff & RBAC, Settings.

Target users — Multi-clinic dental service organizations (DSOs) and independent practices, modeled through seven personas: Super Admin, DSO Admin, Clinic Owner, Dentist, Front Desk, Insurance Coordinator, and Billing Manager.

2. Navigation Structure

Top-level sidebar (in display order):

- Dashboard
- Patients
- Appointments
- Clinical
- Imaging
- Insurance
- Claims
- Billing
- Communications
- AI Workforce
- Workflows
- Analytics
- CEO Copilot
- Integrations
- Staff & Audit Logs
- Settings

The sidebar reads `authStore.user.permissions` and hides any module where the user’s level is “None.” It collapses to an icon rail on small screens and highlights the active route.

Full route table

Route	Dynamic Segment	Purpose
/login	—	Email/password authentication
/login/mfa	—	6-digit MFA verification + access-preview matrix
/dashboard	—	Daily operational command center / KPIs
/patients	—	Patient list / CRM
/patients/[id]	PAT-xxxx	Patient detail: demographics, insurance, history, ledger, journey
/appointments	—	Calendar/list scheduling
/clinical	—	SOAP notes, charting
/imaging	—	X-ray/CBCT/photo review with AI caries-detection overlay
/insurance	—	Eligibility verification, pre-auth tracking
/claims	—	Claims list/lifecycle
/claims/[id]	CLM-xxxx	Claim detail: CDT codes, AI score/flags, status history
/billing	—	Invoices, AR, payment collection
/communications	—	Inbox, campaigns, templates, review requests
/ai-workforce	—	Agent grid + live activity feed
/ai-workforce/[agent]	agent-receptionist, etc.	Agent detail: calls, task log, config, 90-day chart
/workflows	—	Automation workflow list + create dialog
/analytics	—	Production/collections reporting
/ceo-copilot	—	Executive AI chat
/integrations	—	Integration hub grid
/integrations/[id]	open-dental, stripe, etc.	Integration detail: health, sync, mapping, errors
/staff	—	User management, role matrix, audit logs
/settings	—	Clinic config, API keys, preferences

Navigation flow — Login → (MFA if required) → Dashboard → any module via sidebar → detail drill-down (patient/claim/agent/integration) → back to list. Global Search (Cmd+K) and the notification bell provide cross-cutting jump points from anywhere in the app.

3. Role-Based Access Control (RBAC)

Permissions are evaluated per module at three levels — **Full** (view+edit), **Read** (view only), **None** (hidden from sidebar, gated by PermissionGuard). Super Admin, DSO Admin, and Clinic Owner are hard-coded to Full everywhere.

Role	Patients	Appts	Clinical	Claims	Billing	Analytics	Settings	AI Agents
Super Admin	Full	Full	Full	Full	Full	Full	Full	Full
DSO Admin	Full	Full	Full	Full	Full	Full	Full	Full
Clinic Owner	Full	Full	Full	Full	Full	Full	Full	Full
Dentist	Full	Full	Full	Read	Read	Read	None	None
Front Desk	Read	Full	None	Read	None	None	None	None
Insurance Coord.	Read	Read	None	Full	Read	Read	None	None
Billing Manager	Read	None	None	Full	Full	Full	None	None

MFA enforcement — Super Admin, DSO Admin, Clinic Owner and Dentist require a 6-digit MFA code at login (fixed demo code per user); Front Desk, Insurance Coordinator and Billing Manager bypass MFA in this configuration.

Enforcement mechanism — `usePermission(module)` resolves the level for the current route; `useCanEdit(module)` is true only when Full, gating action buttons; `PermissionGuard` renders a full “Access Restricted” screen for None or a read-only banner for Read.

Per-role journeys

- **Super Admin / DSO Admin** — cross-org oversight across every clinic via org switching; full Staff/Audit Logs access.
- **Clinic Owner** — single-clinic full control; primary user of CEO Copilot and Analytics.
- **Dentist** — Patients → Appointments → Clinical (SOAP), read-only on Claims/Billing/Analytics.
- **Front Desk** — scheduling/check-in focused; read-only Patients; no Clinical, Billing, Settings, AI Agents.
- **Insurance Coordinator** — owns Claims end-to-end; read context on Patients/Appointments/Billing/Analytics.
- **Billing Manager** — owns Claims and Billing; Analytics Full for revenue reporting; no Appointments/Clinical.

4. Module-by-Module Breakdown

Dashboard (/dashboard)

Purpose: Daily operational command center.

KPI Cards: Total Revenue (MoM trend), Active Patients, Claims Pending, AI Automation Rate.

Charts: Revenue over 7D/30D/12M (Recharts).

AI involvement: Automation Rate KPI computed from agent task data.

Connected workflows: Links into Patients, Claims, AI Workforce.

Patients (/patients, /patients/[id])

Purpose: Clinical/demographic CRM and ledger.

Features: Searchable list with quick actions; detail view with demographics, primary/secondary insurance (PPO/HMO, deductible, annual max, coverage %), medical history, allergies, medications, dental history, treatment plans, claims, invoices, communications log, documents, and a Journey timeline.

Actions: Add New Patient, edit record, view ledger.

AI involvement: Journey steps can be attributed to an AI agent.

Data displayed: Risk score, lifetime value, outstanding balance, recall-due date, next appointment.

Appointments (/appointments)

Purpose: Daily/weekly scheduling and check-in.

Features: FullCalendar day/week view; simulated incoming-call ringtone via Web Audio API; New Appointment action.

Data displayed: Chair, dentist, type, status, insurance-verified flag, pre-auth-required flag, estimated revenue.

Clinical (/clinical)

Purpose: Charting visits and SOAP documentation.

KPI Cards: Daily Patients, Notes Completed, AI Time Saved, Missing Notes.

Features: New Note dialog (patient, 12 visit types, tooth number); AI SOAP Generator drafts Subjective/Objective/Assessment/Plan; session-local notes list.

AI involvement: AI Scribe drafts SOAP content.

Imaging (/imaging)

Purpose: X-ray/CBCT/intraoral photo review.

Features: Image grid with mock AI caries-detection overlay.

AI involvement: AI Radiology (simulated detection markers).

Insurance (/insurance)

Purpose: Eligibility verification and pre-authorization tracking.

KPI Cards: Clean Claim Rate, Avg Days to Pay, Total Denied.

Features: Verification status badges, coverage breakdown (preventive/basic/major/ortho %).

AI involvement: AI Insurance performs verification/pre-auth, logged to its task log.

Claims (/claims, /claims/[id])

Purpose: Insurance claim lifecycle management.

Data model: CDT codes, totals billed/allowed/paid, patient responsibility, status (Draft→Submitted→Pending→Approved/Denied/Appealed→Paid), denial reason, aiScore (0–100), aiFlags, attachments.

AI involvement: AI Claims prepares, submits, and appeals claims; risk scoring flags likely denials.

Billing (/billing)

Purpose: Patient statements and accounts receivable.

KPI Cards: Total Collections, AR > 90 Days, Patient Balances.

Features: Payment collection dialog, invoice generation, payment history (Cash/Check/Credit Card/ACH/CareCredit).

AI involvement: AI Billing manages AR follow-ups and statement delivery.

Communications (/communications)

Purpose: Patient outreach across SMS, Email, Voice.

KPI Cards: Total Messages, Active Campaigns, Avg Review Rating, Total Recipients.

Features: Two-way Inbox; New Campaign wizard (Recall, Reactivation, Birthday, Review); Send Review Request dialog (Google/Yelp); reusable templates.

AI involvement: AI Recall drives recall/reactivation campaigns; messages can be flagged agentGenerated.

AI Workforce (/ai-workforce, /ai-workforce/[agent])

Purpose: Monitor and configure the 8 autonomous agents.

List page: 4-column agent grid (avatar, status pulse, tasks/success%/revenue, sparkline, current activity), live activity feed refreshing every 6s, Configure sheet (confidence threshold, auto-approve, notifications, working hours).

Detail page: stat cards, task log, configuration panel, 90-day performance chart; Receptionist adds a Call Recordings section with a Call Player modal (Web Speech API TTS).

Connected workflows: Activities populate notifications, journey steps, and the dashboard automation rate.

Workflows (/workflows)

Purpose: No-code, event-driven automation.

Features: Summary cards (Total Actions, Active/Paused/Draft); workflow cards with trigger, step count, action count, last run, Play/Pause/Edit/Duplicate/Delete; Create Workflow dialog (name, trigger, description).

Note: trigger-based, no visual drag-and-drop builder in the current build.

Analytics (/analytics)

Purpose: Owner-level financial/operational reporting.

Features: Production vs. Collections charts filterable by 7D/30D/12M.

CEO Copilot (/ceo-copilot)

Purpose: Conversational executive Q&A over practice data.

Layout: Left sidebar of prior conversations + New Conversation; right pane chat with streaming responses, typing indicator, 6 suggested questions.

AI involvement: Responses are pre-scripted markdown referencing real KPIs with deep links to other modules — not a live LLM call in this build.

Integrations (/integrations, /integrations/[id])

Purpose: Third-party connection management.

List page: summary cards (Connected count, Avg Health Score, Total Records Synced), grid with health bar and sync frequency.

Detail page: connection toggle, field-mapping config, sync history, API usage chart, error logs, Test Connection action.

Staff & RBAC (/staff)

Purpose: HR, permission management, security auditing.

Features: User management table; Role Matrix tab; Audit Logs tab (Time, User, Action, Module, IP, Result with color-coded Success/Denied badges).

Settings (/settings)

Purpose: Practice configuration.

Features: Clinic details, API/integration key management, system preferences (theme, notifications).

5. Patient Journey Flow

Lead → Appointment → Insurance → Visit → Imaging → Treatment → Claims → Billing → Recall → Revenue Insights

Stage	User Actions	AI Actions	System Actions	Status Transition
Lead	Staff/patient initiates contact	AI Receptionist answers/books call	Patient record created (PAT-xxxx)	— → New Patient
Appointment	Front Desk confirms/reschedules	AI Receptionist books/reminds	Appointment status set	Scheduled → Confirmed

Stage	User Actions	AI Actions	System Actions	Status Transition
Insurance	Insurance Coordinator reviews	AI Insurance verifies eligibility/pre-auth	eligibility/Verified flag set	Unverified → Verified
Visit	Dentist checks in patient	—	Appointment status updates	Confirmed → In Progress → Completed
Imaging	Dentist reviews images	AI Radiology highlights caries risk	Images attached to chart	—
Treatment	Dentist documents visit, proposes plan	AI Scribe drafts SOAP note	Treatment plan created	Proposed → Accepted/Declined → In Progress → Completed
Claims	Insurance Coordinator reviews/submits	AI Claims preps, scores, submits, appeals	Claim status updates, aiScore/aiFlags set	Draft → Submitted → Pending → Approved/Denied/Appealed → Paid
Billing	Billing Manager collects/follows up	AI Billing sends statements/AR follow-ups	Invoice/payment recorded	Outstanding → Partial → Paid (or Overdue)
Recall	—	AI Recall triggers reminder campaigns	recallDue evaluated, workflow fires	Patient flagged due → contacted → rebooked
Revenue Insights	Clinic Owner asks CEO Copilot	AI Revenue surfaces unscheduled-treatment/up sell opportunities	Journey step logged with agent attribution	Insight surfaced → action taken

Every stage transition can be written into the patient's journey: `JourneyStep[]`, recording stage, date, status, and the agent (if any) responsible — giving a full audit trail of human vs. AI actions.

6. AI Workforce Documentation

Agent	Purpose	Trigger	Outputs	Screens	Business Value
AI Receptionist	Phone-based booking & inquiries	Inbound/outbound call event	Appointment booked, patient record, transcript	/ai-workforce/agent-receptionist, Appointments	Captures overflow demand without added headcount
AI Scribe	Clinical documentation	New clinical note started	Draft SOAP note (S/O/A/P)	Clinical, agent-scribe	Cuts documentation time per visit
AI Insurance	Eligibility & pre-auth	New appointment / plan created	Verified eligibility, pre-auth status	Insurance, agent-insurance	Reduces day-of-visit coverage surprises
AI Claims	Claim prep, submission, appeals	Treatment completed / claim denied	Submitted claim, aiScore, aiFlags, appeal	Claims, agent-claims	Improves clean-claim rate, recovers denials
AI Recall	Recall/reactivation outreach	recallDue date approaching	SMS/Email/Voice campaign sends	Communications, agent-recall	Fills schedule gaps, recovers lapsed patients
AI Billing	AR management & statements	Invoice overdue threshold	Statement sent, follow-up logged	Billing, agent-billing	Shrinks AR > 90 days
AI Revenue	Opportunity identification	Periodic scan of unscheduled treatment	Flagged revenue opportunities	Analytics, agent-revenue	Surfaces unrealized production
CEO Copilot	Executive insight Q&A;	User question in chat	Narrative answer + deep links	/ceo-copilot	Instant, conversational BI for owners

All agents share: status (active/idle/paused), tasksToday, successRate, revenueToday, a 7-day sparkline, and a configurable confidence threshold + auto-approve threshold + working-hours window. Activity is simulated client-side (refreshing roughly every 6 seconds) rather than driven by a live LLM backend.

7. Integration Hub

Integration	Category	Data Exchanged	Status
Open Dental	Practice Management	Patients, appointments, charts	Connected · 92% · 4,231 rec · 15-min sync
Dentrix	Practice Management	Patients, appointments, charts	Disconnected (available, inactive)
DEXIS	Imaging	Radiographs, CBCT scans	Connected · 88% · 1,847 rec · real-time
DentalXChange	Claims Clearinghouse	CDT claims, EOBs	Connected · 95% · 2,134 rec · 5-min sync
Weave	Communications	SMS, calls, reviews	Connected · 78% · 8,921 rec · 30-min sync
Stripe	Payments	Charges, payouts	Connected · 99% · 3,402 rec · real-time
QuickBooks	Accounting	Invoices, payments, ledger	Connected · 91% · 1,203 rec · daily 6 AM
Google Workspace*	Productivity	Scheduling, email	Connected · 96% · 5,621 rec · 10-min sync
Twilio*	SMS/Voice	SMS/voice events	Connected · 94% · 12,489 rec · real-time
SendGrid*	Email	Campaign sends	Connected · 97% · 9,834 rec · real-time

**Present in seed data beyond the originally specified list — included for completeness.*

Screens affected: /integrations list and /integrations/[id] detail (health score, sync frequency, field-mapping config, sync history, API usage chart, error log, Test Connection). **Workflow impact:** integration health/sync status feeds Dashboard data freshness and can gate workflow execution (e.g., claims workflows depend on DentalXChange being connected).

8. Workflow Engine

Workflow	Trigger	Steps	Status	Actions Taken
Missed Appointment Recovery	No-Show	5	Active	234
New Patient Welcome Series	New Patient	6	Active	567
Claim Denial Appeal	Claim Denied	4	Active	89
90-Day AR Collection	Invoice 90 Days Overdue	5	Active	145
Annual Recall Reminder	Recall Due –30 Days	4	Active	892
Treatment Plan Follow-Up	Plan Not Accepted (7 Days)	3	Paused	234
Birthday Campaign	Patient Birthday –3 Days	2	Active	412
Post-Visit Review Request	Appointment Completed	3	Draft	0

Available triggers (Create Workflow dialog): Patient Recall Due, Appointment Booked, Appointment Completed, Claim Denied, Invoice Overdue, New Patient Added, Treatment Plan Created, Manual Trigger.

Editable builder capabilities: name, description, and trigger selection at creation; status toggling (Activate/Pause), Edit, Duplicate, Delete on existing cards. There is no visual drag-and-drop step builder in the current implementation — workflows are configured as trigger + step-count metadata rather than a graph editor.

9. Live Agent Monitoring

- **Agent status tracking** — each AIAgent carries status (active/idle/paused), toggled from the workforce grid or detail page.
- **Activity feed** — renders the most recent activity entries (action, outcome, related patient/claim, timestamp), animated in/out; the list page keeps the 15 most recent activities, refreshing roughly every 6–8 seconds.
- **Task execution** — simulated client-side; no real task queue or backend execution. Activities are generated from a template pool and prepended to the activity array (capped at 50).
- **Performance metrics** — tasksToday, successRate, revenueToday, 7-day sparkline on the grid; 90-day Tasks vs. Success-Rate line chart on the agent detail page.
- **Real-time simulations** — Receptionist call recordings are played back via the Web Speech API with distinct voice/pitch for AI vs. Patient lines, a progress bar, and a fabricated waveform.

10. Analytics & Reporting

KPIs: Total Revenue (+MoM), Active Patients, Claims Pending, AI Automation Rate, Clean Claim Rate, Avg Days to Pay, Total Denied, Total Collections, AR > 90 Days, Patient Balances, Daily Patients, Notes Completed, AI Time Saved, Missing Notes, Total Messages, Active Campaigns, Avg Review Rating.

Charts: Revenue trend (7D/30D/12M), Production vs. Collections (7D/30D/12M), agent 90-day Tasks/Success-Rate line chart, agent 7-day sparklines, integration API-usage 14-day chart.

Reports: module-level KPI cards function as lightweight reports; no dedicated report-builder/export screen beyond Analytics' chart filters.

Revenue insights: surfaced primarily via AI Revenue agent flags and CEO Copilot narrative answers. **Agent performance metrics:** tasksToday, successRate, revenueToday per agent; aggregated automation rate on Dashboard.

11. Demo Mode Flow

uiStore exposes activeDemo and demoStep with setter actions, indicating a guided walkthrough capability. Based on the seeded data and module order, the intended guided flow is:

- 1 **Login** — pick a seeded user (e.g., Sarah Martinez, Clinic Owner) → MFA screen shows the access-preview permission matrix before code entry.
- 2 **Dashboard** — land on KPI overview; revenue/automation cards animate in.
- 3 **Patients** — open a high-LTV patient (e.g., Marcus Jackson PAT-0099) to show full chart, insurance, journey timeline.
- 4 **Appointments** — view the day's schedule; a simulated inbound call triggers the ringtone.
- 5 **AI Workforce** — open AI Receptionist agent detail, play a call recording end-to-end.
- 6 **Clinical** — start a new note, trigger the AI SOAP Generator for an Exam visit type.
- 7 **Imaging** — open an X-ray showing the AI caries-detection overlay.
- 8 **Insurance / Claims** — show a claim with a high aiScore flag, Submitted → Approved.
- 9 **Billing** — collect a payment via the payment dialog; show AR > 90 days.
- 10 **Communications** — launch a Recall campaign wizard; show the AI-generated SMS preview.
- 11 **Workflows** — show the Annual Recall Reminder workflow firing (892 actions taken).
- 12 **Analytics** — switch the Production vs. Collections chart between 7D/30D/12M.
- 13 **CEO Copilot** — ask “Why did revenue drop this month?” and watch the streamed answer.
- 14 **Integrations** — show DentalXChange/Stripe health scores and a recent sync.
- 15 **Staff** — show the Role Matrix and an Audit Log entry for a denied access attempt.

Every step above maps to an existing screen/component; no step requires data outside what's already seeded.

12. Complete Application Flow Diagram

13. Screen Inventory

Screen	Purpose	Key Actions	Full-Access Roles
Login	Authenticate	Sign in	All
MFA Verification	Second factor + preview	Enter code	Owner, Dentist, Admins
Dashboard	Practice overview	View KPIs/charts	All (read minimum)
Patients (list)	Browse patients	Search, Add Patient	Owner/Dentist/Admins (Full)
Patient Detail	Full chart view	Edit, view ledger/journey	Owner/Dentist/Admins
Appointments	Scheduling	New Appt, check-in	Owner/Dentist/Front Desk/Admins
Clinical	Charting	New Note, AI SOAP	Owner/Dentist/Admins
Imaging	Image review	View, AI overlay	Owner/Dentist/Admins
Insurance	Eligibility tracking	Verify, view coverage	Insurance Coord./Owner/Admins
Claims (list)	Claim lifecycle	Submit, appeal	Insurance Coord./Billing Mgr/Owner/Admins
Claim Detail	Single claim	Edit, appeal, attach	Same as above
Billing	AR & invoicing	Collect payment, invoice	Billing Mgr/Owner/Admins
Communications	Outreach hub	New campaign, review req.	Owner/Admins
AI Workforce (list)	Agent monitoring	Toggle, Configure	Owner/Admins
Agent Detail	Single agent	Play call, adjust thresholds	Owner/Admins
Workflows	Automation list	Create/Edit/Toggle	Owner/Admins
Analytics	Reporting	Filter date range	Owner/Billing Mgr/Admins
CEO Copilot	Executive chat	Ask question	Owner/Admins
Integrations (list)	Connection overview	Connect/Disconnect	Owner/Admins
Integration Detail	Single integration	Test connection, mapping	Owner/Admins
Staff	HR & audit	Manage users, view logs	Owner/Admins
Settings	Configuration	Edit clinic/org/API settings	Owner/Admins

14. Feature Inventory

Feature	Module	AI Agent	Workflow Dependency
Add/edit patient chart	Patients	—	New Patient Welcome Series
Patient journey timeline	Patients	All (attribution)	—
Calendar booking	Appointments	AI Receptionist	Missed Appointment Recovery
Incoming-call ringtone simulation	Appointments	AI Receptionist	—
AI SOAP note generation	Clinical	AI Scribe	—
Caries-detection overlay	Imaging	AI Radiology (visual)	—
Eligibility verification	Insurance	AI Insurance	—
Claim risk scoring (aiScore/aiFlags)	Claims	AI Claims	Claim Denial Appeal
Payment collection / AR follow-up	Billing	AI Billing	90-Day AR Collection
Campaign wizard	Communications	AI Recall	Annual Recall Reminder, Birthday Campaign
Review request send	Communications	—	Post-Visit Review Request
Agent grid + live activity feed	AI Workforce	All 8 agents	—
Call recording playback (TTS)	AI Workforce	AI Receptionist	—
Agent confidence/auto-approve config	AI Workforce	All 8 agents	—
Create/Toggle/Duplicate workflow	Workflows	—	self
Production vs Collections chart	Analytics	AI Revenue (source)	—
Conversational business Q&A;	CEO Copilot	CEO Copilot	—
Integration connect/disconnect	Integrations	—	gates dependent workflows
Role matrix view	Staff	—	—
Audit log review	Staff	—	—
Global search (Cmd+K)	Cross-cutting	—	—
Notifications center	Cross-cutting	All agents (source)	—

15. End-to-End User Stories

New patient booking

A prospective patient calls the practice after hours. AI Receptionist answers, captures demographics, checks chair/dentist availability, and books a Cleaning appointment. A new Patient record (PAT-xxxx) is created with a journey stage “Lead → Appointment” attributed to agent-receptionist. Front Desk sees the new appointment the next morning and confirms it; a notification appears in the bell menu.

Emergency patient

A patient calls in pain. AI Receptionist classifies it as urgent, books an Emergency-type appointment same-day, and flags the chair. Front Desk sees the booking highlighted; the dentist uses the AI SOAP Generator after the visit, then creates a treatment plan.

Insurance verification

Insurance Coordinator opens Insurance for a newly booked patient. AI Insurance has already run eligibility verification, setting eligibilityVerified and populating deductible/annual-max/coverage percentages. The Coordinator confirms before the visit, avoiding a day-of surprise.

Claim submission

After a completed Filling visit, AI Claims assembles CDT codes into a claim, runs a risk score, and finds an aiFlag for a missing X-ray attachment. The Insurance Coordinator attaches the image; the claim moves Draft → Submitted → Approved/Denied. If Denied, the Claim Denial Appeal workflow triggers AI Claims to draft an appeal.

Recall campaign

The Annual Recall Reminder workflow fires for patients whose recallDue is 30 days out. AI Recall sends a personalized SMS/Email; if unanswered in 7 days, escalates to a phone reminder logged as agentGenerated. The Owner sees campaign performance on the agent-recall detail page (124 tasks, 76% success).

Revenue optimization

AI Revenue scans treatment plans and patient history, flags unscheduled high-value procedures and lapsed high-LTV patients. The Clinic Owner asks CEO Copilot “Where are our revenue opportunities?” and gets a markdown-formatted answer naming specific patients with deep links to act directly.

CEO asking business questions

The Clinic Owner opens CEO Copilot, selects “Why did revenue drop this month?” The assistant streams a structured analysis (key numbers, likely causes such as a Delta Dental denial spike, recommended actions) with inline links back to Claims and Communications so the owner can act immediately.
